

SAN TOOLKIT™ FROM EAGLE SOFTWARE

Simplify the protection of your SAN storage environment with customized solutions from EAGLE. EAGLE, a leader in storage design and integration services, has developed the SAN Toolkit™, a suite of programs designed to streamline and enhance the automation of backup and recovery of SAN storage. These products integrate seamlessly into existing backup solutions, and save you management time and valuable server resources.

The EAGLE SAN Toolkit™ includes:

SNAP PROXY

SNAP Proxy is a set of programs that can be kicked off by your existing backup application to automate the process of generating snapshots of SAN volumes, and mounting the snapshot to a backup server. SNAP Proxy features and benefits include:

REDUCE the need for backup agents on SAN servers, only on backup server

LAN-FREE backup of SAN volumes

OFFLOADS backup processing from production SAN servers

Fast, easy **DATA RESTORES** from near-line volume snapshots

SNAP BACK

SNAP Back automates the process of mounting snapshots into a recovery directory to allow for quick, easy location and selection of files to be recovered. SNAP Back features and benefits include:

SUPPORTS any **SAN** that is a VSS Hardware Provider (Windows 2003 and later)

AUTOMATIC MOUNTING of a VSS consistent snapshot

Coming soon for **LINUX** and **UNIX SAN** attached volumes (crash consistent only)

Allows for **MULTIPLE SNAPSHOT** to be mounted simultaneously

SNAP COPY

Provides block-level copies of VSS snapshots from the current production server volume to a new SAN volume. This tool enables you to do faster, online migration of data from DAS to SAN or SAN to SAN while maintaining shares. SNAP Copy features and benefits include:

FASTER COPIES from old storage to new

Initial copy of data requires **NO DOWNTIME**

File system **ATTRIBUTES** are **MAINTAINED** such as file share information

Can be used to **MIGRATE DATA** to or from any DAS to SAN or SAN to SAN

Supports **WINDOWS** 2003 or later

SNAP FREEZE FOR SQL

SNAP Freeze uses Microsoft's SQLVDI (Virtual Device Interface) to quiesce SQL, allowing snapshots to be created with SQL in a consistent state. The snapshot(s) can then be connected to another server for backup, testing, or data mining. SNAP Freeze features and benefits include:

Use with SNAP Proxy (or other programs) to provide a **CONSISTENT IMAGE** of SQL databases

SUPPORTS SQL 2000 SP3 or later on ANY version of Windows

Contact your EAGLE representative for more information on pricing, installation and product support for SAN Toolkit products. In addition to SAN Toolkit, EAGLE provides a total storage solution including storage and backup hardware, software, virtualization, professional services and product support.
